

Highfill Waterworks

Town Council Update – September 10, 2009

- Silver Meadows has received final approval through the Arkansas Health Department on the sewer designs. They are currently working on sub-division.
- The recirculation system was brought online 8/17. The Health dept. has been here taking tests to verify it is working for what it was installed for, to lower disinfection by-products.
- We changed out 16 water meters that had gone bad.
- Working with the “Community Resource Group” out of Fayetteville. They offer free technical services to small utilities like us. They receive their funding through state and federal grants. They are currently looking in depth at our system to see where they can help both operationally and managerially. We are currently working on the airport contract, mainly rates.
